FRENCH'S SPECIAL LAWN GRASS MIXTURES

Good seed is essential. Our mixtures contain only the finest natural grasses, selected for purity and high germination.

HOW MUCH SEED?

You can figure how much lawn seed you need from the Table below, which is compiled on the basis of 1 pound of seed for 250 square feet of lawn.

Area in sq. ft.	Size of area	Lbs. seed required	Area in sq. ft.	Size of area	Lbs. seed required

HOW TO CARE FOR IT

Mowing, watering, fertilizing, weed control and insect control are the routine requirements of a well-kept lawn. Three of these needs can be taken care of at one time by using one of the new three-way preparations in which fertilizer, weed killer and insecticide are skillfully combined. Ask us for details.

When possible give your lawn a good top-dressing of organic matter at least once a year. Garden compost, peat moss, well rotted leaves, sterilized cow manure, sheep guano are all good materials for top dressing. Application should be made in early spring. Remember a top dressing of organic material does not remove the need for chemical fertilizers, but it will do for your turf what no chemical fertilizer can possibly do.

Do not use the unsterilized rotted manure which is being sold to inexperienced gardeners. It may be full of wild clover and other weed seeds and pests. It is expensive when you take into consideration that a few pounds of good fertilizer is equal to a sack of manure. If you want a moisture-holding material for top-dressing, use peat. We recommend the use of peat.
